

MQTT Protocol

Revision History:

Date	Updated by	Description
2021/3/12	Yang Guo	Initial version

1 Overview

1.1 Topics defined

topic/face/capture/request/{deviceno}

Device publishes real-time capture record to this topic, e.g., topic/face/capture/request/0123F6-DEFAB2-4D65EE.

topic/face/capture/response/{deviceno}

Device subscribes to this topic to receive ack of the real-time capture record published above. e.g., topic/face/capture/response/0123F6-DEFAB2-4D65EE.

topic/face/manage/request/{deviceno}

Device subscribes to this topic to receive configure and control request, e.g., topic/face/manage/request/0123F6-DEFAB2-4D65EE.

topic/face/manage/response/{deviceno}

Device publishes the response to configure and control request received above to this topic, e.g., topic/face/manage/response/0123F6-DEFAB2-4D65EE.

1.2 Conventions

1. The line starts with '#' is comment.
2. String should be utf-8 encoded.
3. The unit of position and size are pixels.
4. String inside json is case sensitive.
5. All fields are required unless specified otherwise.
6. New key/value pair may be add to json in future releases. Some deserialization library in some programming language might throw exception when the undefined key/value pair are encountered. For example, [Jackson](#) in java language.

1.2.1 General Response Format

```
{  
    # The ack flag  
    "reply": "ACK",  
  
    # The command that triggers the response
```

```

    "cmd": "request persons",

    # Ack code
    # 0: success; other value: the error code
    # In the case of error, an optional 'desc' key maybe included to carry the error message
    "code": 0,

    # Device SN
    "device_sn":"0123xx-xxxx-xxxxEE",

    # Commad specific info follows
}

```

1.3 Error Code

- 0: Request successfully processed
- 1: Protocol version mismatch
- 2: Server does not contain the service corresponding to the request
- 3: The request packet contains an illegal field
- 4: Authentication failed
- 5: System busy
- 6: Insufficient resources
- 7: System function authorization failure
- 8: System functionality has been Authorization
- 9: Upgrade package mismatch
- 10: File download failed
- 11: File integrity check failed
- 12 to 19: Reserved
- 20: Data entry reaches upper limit
- 21: Record already exists
- 22: Record does not exist
- 23: Failed to write data
- 24: Failed to read data
- 25: Failed to extract feature values
- 26: Portrait quality does not meet registration requirements
- 30: Wigenka does not support fuzzy matching
- 35: Image decoding failed
- 36: The image is too large to extract features from, cannot exceed 10MB
- 37: Image Normalization failed
- 38: Face size is too small
- 39: The quality of portraits is too poor
- 40: The number of faces in the image is not 1
- 41: The face in the image is incomplete

16: Face repetition (the same face was found to already exist in the library when registered)

1.4 Enums

```
// OSD items
enum LcdDisplayItem {
    Title = 0x1, // title
    Time = 0x1<<1, // time
    Ip = 0x1<<2, // IP
    RegNum=0x1<<3, // registered faces count
    SN=0x1<<4, // device SN
    Wiegand=0x1<<5, // Wiegand card number
    FourG=0x1<<6, // 4G signal
    RecoNum=0x1<<7// count of body temperature measurements
};
```

2 Commands

2.1 Face database management

2.1.1 Query registered faces

● Request

```
{
    # command
    "cmd": "request persons",

    # category, 0: normal, 1: whitelisted, 2: blacklisted, -1: all
    "role": -1,

    # 1-based page number
    "page_no": 1,

    # page size, max 20
    "page_size": 10,

    # value indicating whether include normalization image in the result (optional)
    # 0: exclude (default), 1: include
    "normal_image_flag": 1,

    # value indicating whether include image in the result
    # 0: exclude, 1: include
```

```

"image_flag": 0,

# matching mode (optional)
# 0: exact, 1: fuzzy
"query_mode": 0,

# criteria (optional)
"condition": {
    # person id (optional)
    "person_id": "0001",

    # name (optional)
    "person_name": "jack",

    # 32-bit Wiegand Number (mutually exclusive with “long_card_no”, optional)
    # doesn’t support fuzzy match
    "wg_card_no": 8,

    # 64-bit Wiegand Number (mutually exclusive with “wg_card_no”, optional)
    # doesn’t support fuzzy match
    "long_card_no": 18446744073709551615,

    # lower bound of valid from time range, must co-exists with “time_start_end” (optional)
    # “useless” value means ignore this value
    "term_start_start": "2017/01/01 00:00:00",

    # upper bound of valid from time range, must co-exists with “time_start_start” (optional)
    # “useless” value means ignore this value
    "term_start_end": "2020/01/01 00:00:00",

    # lower bound of valid to time range, must co-exists with “term_end” (optional)
    # “never”: already expired, “forever”: never expire
    "term_start": "2017/01/01 00:00:00",

    # upper bound of valid to time range, must co-exists with “term_start” (optional)
    # “never”: already expired, “forever”: never expire
    "term_end": "2020/01/01 00:00:00"
}

}

```

● Response

```
{
    "reply": "ACK",
}
```

```
"cmd": "request persons",

"code": 0,

"device_sn": "01231B-87182C-C1C6EE",

# the following exists when code = 0

# total count of registered faces
"total": 2000,

# 1-based page number

]
}

```

2.1.2 Register Face

● Request

```

{
  "cmd": "upload person",

  # id, length must be <= 19 english character
  "id": "0001",

  # the following section are optional
  # if images are omitted, the person can access the gate only by id card or Wiegand card
  # if Wiegand card number is omitted, the person can access the gate only by id card
  # in the case of update, the old value will be overwiten

  # name, max 63 bytes, optional when update
  "name": "XiaoMing",

  # category, 1: whitelisted (default); 2: blacklisted
  "role": 1,

  # gate access control rule number
  # 0-15, 0: n/a (default), non-zero: rule number

  "kind": 0,

  # the image, base64 encoded
  # jpg and png are supported. Jpg image must be < 4MB, and the resolution should be <= 2
  million pixels
  "reg_image": "/9j/4AAQSkZJRgABAQAAAQABAAAD/...",

  # 32-bit Wiegand card number
  # used with 26 bit and 34 bit Wiegand reader
  "wg_card_id": 8,

  # 64-bit Wiegand card number
  # used with 37 bit and 66 bit Wiegand reader
  "long_card_id": 18446744073709551615,
}
```

```

# valid from time
"term_start": "2017/11/10 12:00:00",

# valid to time
# “forever”: never expire; “never”: always expired
"term": "2017/12/18 16:45:30",

# user defined info, max 67 bytes
"customer_text": "",

# the following section are for advanced user
    # normalized image, this value has higher priority than “reg_image”.
    # normalized image are preprocessed ones that are faster for registration.
    # normalized image can be get by api call or from registered camera.
    "normal_image": "",

    # the action to take. 0: auto (default), 1: register, 2: update
    # auto: update if the id already exists otherwise register
    # in the case of register, if the id exists, error occurs
    # in the case of update, if the id doesn’t exists, error occurs
    "upload_mode":1,

    # thumbnail image for OSD display, base64 encoded, jpg format
    # if omitted, it will be generated automatically from “reg_image”
    "thumb_image": "/9j/4AAQSkZJRgABAQAAAQABAAAD/..."

}

```

● Response

```

{
    "reply": "ACK",

    "cmd": "upload person",

    "code": 0,

    "device_sn": "01231B-87182C-C1C6EE",

    # id in the request
    "id": "0001"
}
```

2.1.3 Delete Registration

● Request

```
{  
    "cmd": "delete person(s)",  
  
    # action  
    # -1: delete by id  
    # 0: delete all normal  
    # 1: delete all whitelisted  
    # 2: delete all blacklisted  
    # 3: delete all  
    "flag": 1,  
  
    # id to delete  
    "id": "0001"  
}
```

● Response

```
{  
    "reply": "ACK",  
  
    "cmd": "delete person(s)",  
  
    "code": 0,  
  
    "device_sn": "01231B-87182C-C1C6EE",  
  
    # id deleted  
    "id": "0001"  
}
```

2.2 Capture record

2.2.1 Real-time capture record publish

● Publish

```
{  
    "cmd": "face",
```

```
# sequence number
"sequence_no": 1,

# device number
"device_no": "0001",
# device SN
"device_sn": "000001-000002-0000BC",

  # the command
  "cmd": "update stream params",
  # error code (0: success)
  "code": 0,
  # device SN
  "device_sn": "01231B-87182C-C1C6EE",
}

```

2.3.6 Reset streaming parameter

● Request

```

{
  # the command
  "cmd": "reset stream params"
}

```

● Response

```

{
  # ack flag
  "reply": "ACK",
  # the command
  "cmd": "reset stream params",
}

```

```

# error code (0: success)
"code": 0,

# device SN
"device_sn": "01231B-87182C-C1C6EE",
}

```

2.3.7 Get access control rules

- **Overview**

1. There can be up to 15 rules. The rule can be configured to work on every day or on specific weekday.

- **Request**

```

{
  # the command
  "cmd": "request schedule params"
}

```

- **Response**

```

{
  # ack flag
  "reply": "ACK",

  # the command
  "cmd": "request schedule params",
  "code": 0,

  # device SN
  "device_sn": "012311-35A0DF-78FBEE",

  # the rules array. Max 15 rules
  "kinds": [
    # a single rule
    {
      # name
      "name": "a rule name",

      # rule number (1-15)
      "kind": 1,
    }
  ]
}

```

```

# mode. Available options: "daily", "weekly"
"mode": "daily",

# configure for each day
"days": [
    # configure for a single day
    {
        "sections": [
            # time frames
            {
                # start time (inclusive)
                "start": {
                    # hour
                    "hour": 8,
                    # minute
                    "minute": 0
                },
                # end time (exclusive)
                "end": {
                    # hour
                    "hour": 12,
                    # minute
                    "minute": 0
                }
            }
        ]
    }
]
}

```

2.3.8 Set access control rules

- **Request**

```

{
    # the command.
    "cmd" : "update schedule params",

    # the rules array. Max 15 rules
    "kinds": [

```

```

# a single rule
{
  # name
  "name": "a rule name",

  # rule number (1-15)
  "kind": 1,

  # mode. Available options: "daily", "weekly"
  "mode": "daily",

  # configure for each day
  "days": [
    # configure for a single day
    {
      # sections": [
        # time frames
        {
          # start time (inclusive)
          "start": {
            # hour
            "hour": 8,
            # minute
            "minute": 0
          },
          # end time (exclusive)
          "end": {
            # hour
            "hour": 12,
            # minute
            "minute": 0
          }
        }
      ]
    }
  ]
}

```

● Response

```
{
  # ack flag
```

```

"reply": "ACK",

# the command
"cmd": "update schedule params",

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE"
}

```

2.3.9 Add access control rule

Same as 2.3.8 , but add to the end of the rules array, the kinds array size can be 1 to 15.
 cmd is “add schedule kind”

2.4 Snapshot

● Request

```

{
  # the command
  "cmd": "snapshot"
}

```

● Response

```

{
  # ack flag
  "reply": "ACK",

  # the command
  "cmd": "snapshot",

  # error code (0: success)
  "code": 0,

  # device SN
  "device_sn": "012311-35A0DF-78FBEE",

  "image":
  {
    # format

```

```

    "format": "jpg",

    # the image data (base64)
    "image_data": "...",

    # timestamp
    "time_stamp": "2020/01/01 00:00:00"
}
}

```

2.5 Device control

2.5.1 GPIO control

- Request

```

{
    # the command
    "cmd": "gpio control",

    # port number
    "port": 1,

    # action. “on”: close, “off”: open
    # only “on” (close) is supported, off is done automatically by device
    "ctrl_type": "on",

    # action mode.
    # “test”: test only, no record of gate opening is generated
    # “force”: force output of the signal
    # “scene”: output of signal is controlled by whether the device is enabled
    "ctrl_mode": "force",

    # person id. Online mode only, used to generate gate opening record
    "person_id": "0001"
}

```

- Response

```
{
    # ack flag
    "reply": "ACK",
}
```

```

# the command
"cmd": "gpio control",

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE",
}

```

2.5.2 Wiegand device control

● Request

```

{
  # the command
  "cmd": "wiegand control",

  # short Wiegand card number, if you use the long Wiegand card number, set this field to 0
  "wiegand_card_no": 0,

  # long Wiegand card number, for wg36、wg44、wg66
  "long_card_id": 9223372036854775807,

  # action mode.
  # “test”: test only, no record of gate opening is generated
  # “force”: force output of the signal
  # “scene”: output of signal is controlled by whether the device is enabled
  "ctrl_mode": "force",

  # person id. Online mode only, used to generate gate opening record
  "person_id": "0001"
}
```

● Response

```

{
  # ack flag
  "reply": "ACK",

  # the command
  "cmd": "wiegand control",
}
```

```

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE",
}

```

2.5.3 Send data to serial port

- **Request**

```

{
  # the command
  "cmd": "send serial data",

  # port number. 1 or 2
  "device_no": 1,

  # data to send, integer array
  "content": [121,1,5,25,26]
}

```

- **Response**

```

{
  # ack flag
  "reply": "ACK",

  # the command
  "cmd": "send serial data",

  # error code (0: success)
  "code": 0,

  # device SN
  "device_sn": "012311-35A0DF-78FBEE",
}

```

2.6 Heartbeat

● Request

```
{  
    # the command  
    "cmd": "heart beat",  
  
    # device ip. Can be empty if the initiator of the request is not camera  
    "ip": "192.168.1.88",  
  
    # device SN (maximum 32 characters). Can be empty if the initiator of the request is not camera  
    "device_sn": "000001-000002-0000BC",  
  
    # device number (maximum 32 characters). Can be empty if the initiator of the request is not camera  
    "device_no": "0001",  
  
    # position number (maximum 32 characters). Can be empty if the initiator of the request is not camera  
    "addr_no": "0001",  
  
    # position name (maximum 96 character). Can be empty if the initiator of the request is not camera  
    "addr_name": "some road name",  
  
    # gps info (gps capable device only)  
    "gps":{  
        # latitude  
        "n":"...",  
        # longitude  
        "e":"...",  
        # number of GPS satellite  
        "strength":0  
    }  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command
```

```
"cmd": "heart beat",

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE",
}
```

2.7 User defined authentication code

2.7.1 Get

● Request

```
{
  # the command
  "cmd": "request customer auth code"
}
```

● Response

```
{
  # ack flag
  "reply": "ACK",

  # the command
  "cmd": "request customer auth code",

  # error code (0: success)
  "code": 0,

  # device SN
  "device_sn": "012311-35A0DF-78FBEE",

  # user defined authentication code (base64)
  "customer_auth_code": "AAA"
}
```

2.8 System control

2.8.1 Get system time

● Request

```
{  
    # the command  
    "cmd": "request date time"  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "request date time",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE",  
  
    # system time  
    "date_time": "2018/11/23 16:00:00"  
}
```

2.8.2 Set system time

● Request

```
{  
    # the command  
    "cmd": "update date time",  
  
    # system time  
    "date_time": "2018/11/23 16:00:00"  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "update date time",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE",  
}
```

2.8.3 Reboot

● Request

```
{  
    # the command  
    "cmd": "reboot"  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "reboot",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE",  
}
```

2.8.4 Restart application

- Request

```
{  
    # the command  
    "cmd": "restart application"  
}
```

- Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "restart application",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE",  
}
```

2.9 Control

2.9.1 Get screensaver

- Request

```
{  
    # the command  
    "cmd": "request lcd screensaver"  
}
```

- Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "request lcd screensaver",
```

```

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE",

# mode
# "none": no screensaver
# "extinguish": turn off display
# "media": play image or video
"screensaver_mode":"media"
}

```

2.9.2 Set screensaver

● Request

```

{
  # the command
  "cmd": "update lcd screensaver",

  # mode
  # "none": no screensaver
  # "extinguish": turn off display
  # "media": play image or video
  "screensaver_mode":"media"
}

```

● Response

```

{
  # ack flag
  "reply": "ACK",

  # the command
  "cmd": "update lcd screensaver",

  # error code (0: success)
  "code": 0,

  # device SN
  "device_sn": "012311-35A0DF-78FBEE"
}

```

2.9.3 Get screensaver media configure

- Request

```
{  
    # the command  
    "cmd": "request lcd media"  
}
```

- Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "request lcd media",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE",  
  
    # screensaver media files (maximum 10)  
    "screensaver_media_list": [  
        {  
            # 1-based index of the file  
            "sequence": 1,  
  
            # file name  
            "media_name": "news1.png",  
  
            # path to the file, see 2.13.1 Download from device  
            "path": "/data_fs/screensaver/NO1.news1.png"  
        },  
        {  
            # 1-based index of the file  
            "sequence": 2,  
  
            # file name  
            "media_name": "news2.png",  
  
            # path to the file, see 2.13.1 Download from device  
        }  
    ]  
}
```

```

        "path": "/data_fs/screensaver/NO2.news2.png"
    }
]
}

```

2.9.4 Update screensaver media

● Request

```

{
    # the command
    "cmd": "update lcd media",

    # updated media files (maximum 10)
    "screensaver_media_list": [
        {
            # 1-based index of the file
            "sequence": 1,

            # file name
            "media_name": "news1.png"
        }
    ]
}

```

● Response

```

{
    # ack flag
    "reply": "ACK",

    # the command
    "cmd": "update lcd media",

    # error code (0: success)
    "code": 0,

    # device SN
    "device_sn": "012311-35A0DF-78FBEE",

    # updated media files (maximum 10)
    "screensaver_media_list": [

```

```
{
  # 1-based index of the file
  "sequence":1,

  # file name
  "media_name":"news1.png",

  # path to the file, see 2.14.1 Download from device
  "path": "/data_fs/screensaver/NO1.news1.png"
}
]
}
```

2.9.5 Delete screensaver media

● Request

```
{
  # the command
  "cmd": "delete lcd media",

  # the media files to be deleted (max. 10)
  "screensaver_media_list": [
    {
      # 1-based screensaver media index
      "sequence":1,

      # media name
      "media_name":"news1.png"
    },
    {
      # 1-based screensaver media index
      "sequence":2,

      # media name
      "media_name":"news2.png"
    }
  ]
}
```

● Response

```
{
```

```

# ack flag
"reply": "ACK",

# the command
"cmd": "delete lcd media",

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE",

# deleted media files (max. 10)
"screensaver_media_list": [
    {
        # 1-based media index
        "sequence":1,
        # media name
        "media_name": "news1.png"
    },
    {
        # 1-based media index
        "sequence":2,
        # media name
        "media_name": "news2.png"
    }
]
}

```

2.9.6 Add OSD text

● Request

```

{
    # the command
    "cmd": "text display",
    # encoding. “utf8” (default) and “gb2312” are supported
    "coding_type": "utf8",
    "text_list": [
        {
            # the position of the text
            "position": {
                "x": 0,

```

```

    "y":500
  },
  # text display duration in milliseconds
  "alive_time": 1000,
  "font_size": 100,
  "font_spacing": 1,
  "font_color": "0xffffffff",
  "text":"some text 1"
},
{
  "position":{
    "x":0,
    "y":610
  },
  "alive_time": 1000,
  "font_size": 100,
  "font_spacing": 1,
  "font_color": "0xff00ff00",
  "text":"some text 2 消费成功 100 元"
}
]
}

```

● Response

```

{
  # ack flag
  "reply": "ACK",

  # the command
  "cmd": "text display",

  # error code (0: success)
  "code": 0,

  # device SN
  "device_sn": "012311-35A0DF-78FBEE"
}

```

2.9.7 Add OSD image

● Request

```
{  
    # the command  
    "cmd": "image display",  
    "position": {  
        "x": 0,  
        "y": 500  
    },  
    # image display duration in milliseconds. 0: forever  
    "alive_time": 1000,  
    # image format, only support: png, jpg  
    "format": "jpg",  
    # image data, base64 encoded  
    "image_data": "..."  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "image display",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE"  
}
```

2.10 Remote upgrade

2.10.1 Query for upgrade

● Request

```
{  
    # protocol version
```

```
"version": "0.2",

# the command
"cmd": "ask_upgrade",

# device SN
"device_sn": "000001-000002-0000BC",

# device number (< 32 characters)

"device_sn": "012311-35A0DF-78FBEE"
}
```

2.11.2 Play audio online

● Request

```
{  
    # the command  
    "cmd": "play audio stream",  
  
    # the audio to play  
    "audio": {  
        # format (only wav format is supported)  
        "format": "wav",  
  
        # the audio data in base64 format  
        "data": "+uqcOrrsSrssetuMmxvM60AAAA"  
    }  
  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "play audio stream",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE"  
}
```

2.11.3 Query built-in audios

● Request

```
{  
    # the command  
    "cmd": "browse audio list"  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "browse audio list",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE",  
  
    "audio_list": [  
        {  
            "audio_no": 0,  
  
            "audio_name": "NO0.pass.wav"  
        },  
        ...  
    ]  
}
```

2.11.4 Test playing built-in audio

● Request

```
{  
    # the command  
    "cmd": "play audio",  
  
    # audio number  
    "audio_no": 0,  
  
    # audio name  
    "audio_name": "NO0.pass.wav"  
}  
Response  
{  
    # ack flag  
    "reply": "ACK",
```

```

# the command
"cmd": "play audio",

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE"
}

```

2.12 Hardware info

2.12.1 Get

- Request

```

{
  # the command
  "cmd": "get hardware info"
}

```

- Response

```

{
  "reply": "ACK",
  # the command
  "cmd": "get hardware info",
  # error code (0: success)
  "code": 0,
  # device SN
  "device_sn": "012353-1FF506-A573EE",
  # motherboard info
  "Board": {
    "manu": "FSAN",
    "model": "FSAN_01"
  },
  # processor info
  "Chip": {
    "manu": "HISI",
    "model": "HI3516AV200"
  },
  # Flash info
  "Flash": {
    "manu": ""
  }
}

```

```

"model": "",  

"size": 0  

},  

# 4G info  

"FourG": {  

    "moduler_4g": "NO" # “YES” “NO”  

},  

# LCD info  

"Lcd": {  

    "manu": "",  

    "model": "LCD_WY_720_576",  

    "support": [  

        "LCD_WY_720_576",  

        "LCD_WY_1280x800",  

        "LCD_WY_1024x600"  

    ]  

},  

# motor info  

"Motor": {  

    "manu": "",  

    "model": "",  

    "type": "RSA"  

},  

# sensor info  

"Sensor": {  

    "manu": "SONY",  

    "model": "IMX185"  

},  

# wifi info  

"WIFI": {  

    "manu": "",  

    "model": ""  

}
}

```

2.12.2 Set

● Request

```
{
# the command
"cmd": "set hardware info",
# LCD info
```

```

    "Lcd": {
        "manu": "",
        "model": "LCD_WY_720_576"
    },
    # 4G info
    "FourG": {
        "moduler_4g": "NO" # “YES” “NO”
    }
}

```

● Response

```

{
    # ack flag
    "reply": "ACK",

    # the command
    "cmd": "set hardware info",

    # error code (0: success)
    "code": 0,

    # device SN
    "device_sn": "012311-35A0DF-78FBEE",
}

```

2.13 File transfer

2.13.1 Download from device

● Request

```

{
    # the command
    "cmd": "download file",

    # path to file
    "path": "/data_fs/screensaver/NO1.news.png",

    # the offset from the start of the file in bytes
    "offset": 0,

    # the length of the download (max. 10240 bytes)
    "size": 10240
}

```

```
}
```

● Response

```
{
  "reply": "ACK",

  # the command
  "cmd": "download file",

  # error code (0: success)
  "code": 0,

  # device SN
  "device_sn": "012311-35A0DF-78FBEE",

  # path to the file
  "path": "/data_fs/screensaver/NO1.news.png",

  # the total length of the file in bytes
  "total_size": 1024000,

  # current offset (together with "size" field, can be used to test if it's last packet)
  "offset": 0,

  # current download size (together with "offset" field, can be used to test if it's last packet)
  "size": 204800,

  # current data chunk (base64)
  "data": "...",

  # md5sum of current data chunk
  "md5sum": "621b929a45c388c7e5ac4e260ea3dc99"
}
```

2.13.2 Upload to device

● Request

```
{
  # the command
  "cmd": "upload file",
```

```

# destination path
"path": "/data_fs/screensaver/NO1.news.png",

# total length of the file
"total_size": 1024000,

# current offset
"offset": 0,

# size of current chunk in bytes (max. 200kB)
"size": 204800,

# current chunk of data (base64)
"data": "...",

# md5sum of current chunk
"md5sum": "621b929a45c388c7e5ac4e260ea3dc99"
}

```

● Response

```

{
    # ack flag
    "reply": "ACK",

    # the command
    "cmd": "upload file",

    # error code (0: success)
    "code": 0,

    # device SN
    "device_sn": "012311-35A0DF-78FBEE",

    # destination path
    "path": "/data_fs/screensaver/NO1.news.png",

    # current offset
    "offset": 0,

    # size of current chunk
    "size": 10240
}

```

2.14 Data upload encryption

2.14.1 Set configure

● Request

```
{  
    # the command  
    "cmd": "updata aes",  
    # original key in base64 format (max. 16 bytes when converted back to binary data)  
    "ori_key": "MTIzNDUAAAAAAA==",  
    # enable or disable encryption (optional, if omitted, keep current setting)  
    "enable": true,  
    # the new key in base64 format (max. 16 bytes when converted back to binary data, optional)  
    "new_key": "MTIzNDU="  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
    # the command  
    "cmd": " updata aes ",  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE"  
}
```

2.14.2 Get configure

● Request

```
{  
    # the command  
    "cmd": "request aes",  
}
```

- **Response**

```
{  
    "version": "0.21",  
    # the command  
    "cmd": "request aes",  
    # error code (0: success)  
    "code":0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE"  
    # current status  
    "enable":true  
}
```

2.15 SIP

2.15.1 Set sip account

- **Request**

```
{  
    # the command  
    "cmd": "sip register",  
  
    # domain or ip  
    "domain": "192.168.0.12",  
  
    # server port number  
    "port": 7121,  
  
    # user name  
    "username": "0123",  
  
    # password (optional)  
    "password": "123456"  
}
```

- **Response**

```
{  
    # ack flag  
    "reply": "ACK",
```

```

# the command
"cmd": "sip register",

# error code (0: success)
"code": 0,

# device SN
"device_sn": "012311-35A0DF-78FBEE"
}

```

2.15.2 Get sip account

- **Request**

```
{
# the command
"cmd": "sip qure register info",
}
```

- **Response**

```
{
# ack flag
"reply": "ACK",
# the command
"cmd": "sip qure register info ",

# domain or ip
"domain": "192.168.0.12",

# server port number
"port": 7121,

# user name
"username": "0123",

# password
"password": "123456"

# error code (0: success)
"code": 0,

# device SN
}
```

```
        "device_sn": "012311-35A0DF-78FBEE"  
    }
```

2.15.3 Delete sip account

- Request

```
{  
    # the command  
    "cmd": "sip unregister",  
}
```

- Response

```
{  
    # ack flag  
    "reply": "ACK",  
    # the command  
    "cmd": "sip unregister",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE"  
}
```

2.15.4 Make sip call

- Request

```
{  
    # the command  
    "cmd": "sip call",  
  
    # destination sip account  
    # format: sip:username@domain:port  
    # or by room number: num:0001  
    "url": "sip:192.168.0.188"  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "sip call",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE"  
}
```

2.15.5 Hangup sip call

● Request

```
{  
  
    # the command  
    "cmd": "sip hangup"  
}
```

● Response

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "sip hangup",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "012311-35A0DF-78FBEE"  
}
```

2.15.6 Sip event publish

Note: no request, the event will be published by device

● Publish

```
{  
  
    # the command  
    "cmd": "sip event",  
  
    # device number  
    "device_no": "0001",  
  
    # device SN  
    "device_sn": "000001-000002-0000BC",  
  
    # position number  
    "addr_no": "0001",  
  
    # position name  
    "addr_name": "some road",  
  
    # event. 0: call ended, 1: call started, 2: caller ringing, 3: caller rejected, 4: caller connected,  
    # 5: called, 6: called connected  
    "sip_event": 1,  
  
}
```

2.15.7 Add/update room number

Note: you can make a sip call in room number format only after the room number has been 注 added

● Request

```
{  
    # the command  
    "cmd": "sip add roomid",  
    # the room number array  
    "room id group":[
```

```
{
    # room number. Must be unique, same room number will be overwritten
    # up to 3 sip accounts can be associated with a room number, they will be tried from sip
    account 1 to sip account 3, it stops trying when either one account succeed or all 3 accounts
    fails
        "room id":"0001",

        # sip account 1
        "sip num":"sip:192.168.1.180"

        # sip account 2 (optional)
        "sip num 1":"sip:192.168.2.180"

        # sip account 3 (optional)
        "sip num 2":"sip:192.168.3.180"
    },
    ....
}
]
```

● Response

```
{
    # ack flag
    "reply": "ACK",

    # the command
    "cmd": "sip add roomid",

    # count of successful addition/update
    "add count": 2,

    # error code (0: success)
    "code": 0,

    # device SN
    "device_sn": "0123FE-738B3A-70E3EE"
}
```

2.15.8 Get room numbers

● Request

```
{
```

```

# the command
"cmd": "sip qure roomid",

# the room number (optional, if omitted all room numbers will be returned)
"room id":"0001",

# fuzzy match (optional, if omitted, exact match)
"fuzzy":true,

# 1-based page number (optional for exact match)
"page_no":1,

# page size (max 500, optional for exact match)
"page_size":500
}

```

● Response

```

{
    # ack flag
    "reply": "ACK",

    # the command
    "cmd": "sip qure roomid",

    # the room number array
    "room id group":[
        {
            "room id":"0001",
            "sip num":"sip:192.168.1.180"
            "sip num 1":"sip:192.168.2.180"
            "sip num 2":"sip:192.168.3.180"
        },
        {
            "room id":"00010",
            "sip num":"sip:192.168.1.181"
            "sip num 1":"sip:192.168.2.181"
            "sip num 2":"sip:192.168.3.181"
        }
        ....
    ]
}
```

```

# total count
"total": 2,

# error code (0: success)
"code": 0,

# device SN
"device_sn": "0123FE-738B3A-70E3EE"
}

```

2.15.9 Delete room number

- Request

```

{
    # the command
    "cmd": "sip del roomid",

    # the room number to delete (if omitted, delete all room number)
    "room id group": [
        {
            "room id": "0001"
        },
        {
            "room id": "0002"
        }
    ]
}

```

- Response

```

{
    # ack flag
    "reply": "ACK",

    # the command
    "cmd": "sip del roomid",

    # error code (0: success)
    "code": 0,

    # device SN
}

```

```
        "device_sn": "0123FE-738B3A-70E3EE"  
    }
```

2.15.10 Set format for calling by room number

● Request

```
{  
  
    # the command  
    "cmd": "set roomid splice",  
  
    # device position  
    # “wall”: the device is positioned at the entrance of the community  
    # “unit”: the device is positioned at the entrance of the block of the building  
    "sip type": "wall",  
  
    # connection character (“wall” only, if omitted, connection character will not be used)  
    "splice symbol": "-",  
  
    # max building number length (0-3, “wall” only, if omitted, building number will not be used)  
    "max building num": 3,  
  
    # max block number length (0-3, “wall” only, if omitted, block number will not be used)  
    "max unit num": 3,  
  
    # max room number length (0-5)  
    "max room num": 5  
}
```

● Response

```
{  
  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "set roomid splice",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN
```

```
        "device_sn": "0123FE-738B3A-70E3EE"  
    }
```

- **Get format for calling by room number**

- **Request**

```
{  
    # the command  
    "cmd": "get roomid splice"  
}
```

- **Response**

```
{  
    # ack flag  
    "reply": "ACK",  
  
    # the command  
    "cmd": "get roomid splice",  
  
    # device position  
    # “wall”: the device is positioned at the entrance of the community  
    # “unit”: the device is positioned at the entrance of the block of the building  
    "sip type": "wall",  
  
    # connection character (“wall” only, if omitted, connection character will not be used)  
    "splice symbol": "-",  
  
    # max building number length (0-3, “wall” only, if omitted, building number will not be used)  
    "max building num": 3,  
  
    # max block number length (0-3, “wall” only, if omitted, block number will not be used)  
    "max unit num": 3,  
  
    # max room number length (0-5)  
    "max room num": 5  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "0123FE-738B3A-70E3EE"  
}
```

2.16 4G

2.16.1 Get 4G status

● Request

```
{  
    # the command  
    "cmd": "request 4g infor"  
}
```

● Response

```
{  
    # the command  
    "cmd": "request 4g infor",  
  
    "reply": "ACK",  
  
    # error code (0: success)  
    "code": 0,  
  
    # device SN  
    "device_sn": "0123FE-738B3A-70E3EE",  
  
    # 4G module status  
    "module_ready": true,  
  
    # SIM status  
    "sim_ready": true,  
  
    # SIM 卡 ICCID  
    "ICCID": "",  
  
    # IMSI  
    "IMSI": "",  
  
    # operator  
    "operator": "China Mobile",  
  
    # RSSI  
    "signal_strength": 0,
```

```

# GPS
"gps": {
    "e": "",
    "n": "",
    "strength": 0
}
}

```

2.16.2 4G data usage stats

- **Request**

```

{
    # the command
    "cmd": "traffic statistics",

    # day (optional, if omitted, data usage of whole month will be returned)
    # format: start day – end day (optionl)
    # e.g.: "1-9": from day one to day nine
    # “1-”: from day one to current day
    #“1”: day one only
    "day": "1-9",
}

```

- **Response**

```

{
    # the command
    "cmd": "traffic statistics",

    "reply": "ACK",

    # error code (0: success)
    "code": 0,

    # device SN
    "device_sn": "0123FE-738B3A-70E3EE",
    "statistics": [
        {

            # date of data usage.
            "date": "6-1", #June 1st

```

```

        # data usage in bytes
        # bytes received
        "bytes_rx":1024,

        # bytes transmitted
        "bytes_tx":1024
    },
{
    # date of data usage, June 2nd
    "date":"6-2",

    # bytes received
    "bytes_rx":1024,

    # bytes transmitted
    "bytes_tx":1024
}
]
}

```

2.17 Volume

2.17.1 Set volume

- Request

```
{
    "cmd": "camera volume",
    // action. "SET" or "GET"
    "method": "SET",
    // the volume
    "volume": 50
}
```

- Response

```
{
    # ack flag
    "reply": "ACK",

    # the command
    "cmd": "camera volume",
    # error code (0: success)
    "code":0,
```

```
# device SN
"device_sn": "0123FE-738B3A-70E3EE"
}
```

2.17.2 Get volume

- Request

```
{
    # the command
    "cmd": "camera volume",
    # action. "SET" or "GET"
    "method": "GET"
